MESSAGE FROM COMSNETS 2018 PANEL CHAIRS

We are excited to welcome you to the COMSNETS panels. This year again, we have three topical panels that have the potential of interesting and lively debate. The three panels are:

- Connected and Self-Driving Cars in India: Will They Ever Work?
- Networking Research is Dead. Long live Networking Research!
- Connecting the Next Trillion: The Future of Wireless at a Crossroads

The above panel topics were chosen for their timeliness, impact on society, and relevance to communications and networking research. The second panel is particularly relevant for students who are embarking on their research careers and who would benefit from a discussion on the choice of important research topics. For each panel, we have invited panelists who are area experts from both academia and industry. Our goal is to facilitate an engaged and active discussion between the panelists and members of the audience so we may learn from each others' diverse viewpoints and experience. We encourage you to attend and bring your questions.
