

Welcome to COMSNETS2020 !

Last decade was special because it has seen more and more inclusion and equality opportunities being extended to women in all walks of life including engineering. Taking this trend forward, this year, a special track is included on COMSNETS from IEEE Women in Engineering Society.

The track includes a plenary session and a panel discussion. The plenary session is themed as 'Technologies for the Next Decade'. This plenary witnesses four talks by professionals from industry. These women leaders are exceptional achievers in their fields, and will be delivering talks on the latest and future trends in technology. The plenary will be followed by a panel discussion themed 'Role of Women in the Next Era of Technology'. This panel discussion is designed to give a befitting summary to the entire track. The panel discussion will focus on different ways in which women can play a major role in shaping the future of technology.

We wish that this entire track will add immense value to all the delegates, audience and participants in general and women engineers in particular. Definitely, this track will pave way for more and more diversity and inclusion in Smart Society 5.0
