LastMileS 2021
Message from the Chairs

LastMileS @ COMSNETS 2021 is a cross-cutting forum where technology, techno-commercial and governance aspects will converge under the overarching theme of "Last-mile Challenges and Standardization Opportunities in Smart Infrastructure". The objective of LastMileS is to bring together researchers, practitioners, smart-city stakeholders and thought-leaders, in a collaborative discussion mode, to present their latest innovations in the area of an appropriate "last-mile" communication, networking, and data transfer framework.

Keeping up with the previous editions, this year also we have brought together a great program. We have a keynote address from an eminent international researcher, and 4 invited talks by distinguished technology leaders from industry and academia. We have 3 peer-reviewed regular papers from leading research institutions and labs across India. This year's program includes papers and talks on a wide range of popular "last-mile" topics such as large-scale WiFi architectures, visible light communication, self-organizing UAVs, and motion intelligence.

On behalf of the organizing and steering committee, we welcome you to LastMiles 2021 on Jan 05, 2021. We look forward to your participation in the workshop.
