

# The Workshop on "Last-mile" Challenges and Standardization Opportunities in Smart Infrastructure

## Message from the Chairs

LastMileS @ COMSNETS 2022 is a cross-cutting forum where technology, techno-commercial and governance aspects will converge under the overarching theme of "Last-mile Challenges and Standardization Opportunities in Smart Infrastructure". The objective of LastMileS is to bring together researchers, practitioners, smart-city stakeholders, rural-connectivity stakeholders, and thought-leaders, in a collaborative discussion mode, to present their latest innovations in the area of an appropriate "last-mile" communication, networking, and data transfer framework for both city and rural settings.

Keeping up with the previous editions, this year also we have brought together a great program.

Here is the link to the program ([https://www.comsnets.org/lastmiles\\_workshop.html](https://www.comsnets.org/lastmiles_workshop.html)). We have a keynote address from an eminent international researcher, and 4 invited talks by distinguished technology leaders from industry and academia. We have 5 peer-reviewed regular papers from leading research institutions and labs across India. This year's program includes papers and talks on a wide range of popular "last-mile" topics such as communication topology or digital infrastructure for building smart cities, wireless last mile options & last mile connectivity, analysis of app response time, traffic surveillance to name a few.

On behalf of the organizing and steering committee, we welcome you to LastMiles 2022 on Jan 04, 2022. We look forward to your participation in the workshop.
