The 8th workshop on Intelligent Transportation Systems (ITS) will be held in conjunction with COMSNETS 2022. This workshop aims to bring together researchers from various disciplines and will focus particularly on interdisciplinary approaches to solving transportation problems. The workshop invites original papers that make contributions to the modeling, control and analysis of transportation systems. We welcome papers involving any combination of theory, analytical modeling and optimization, numerical simulations, real-world data-driven approaches, experimentation, advanced deployment and case studies. Studies involving economic, behavioral and environmental aspects are equally welcome.

Topics of interest include, but are not limited to:

- Autonomous and Connected (V2X) vehicles
- Artificial Intelligence (AI) and Machine Learning (ML) in ITS
- Naturalistic driving datasets and data analytics
- Human factors and Human Machine Interfaces (HMI) in ITS
- Behavioral science applications and techniques for ITS
- Security, privacy and safety of systems
- Advanced mobility alternatives, e.g. E-Mobility, air mobility, shared mobility etc.
- ITS field tests, deployments and experimentation
- Traffic theory for ITS
- Emergencies and accidents: phenomena, management and mitigation
- Testing and certification of autonomous and ML-based transportation systems
- Modeling, detection and avoidance of vulnerable road users and animals
- Public policy, and regulatory and societal issues in ITS
- Logistics and Transportation demand management
- Multi-modal and public transportation management
- COVID-19 and its impact on transportation system
- Future of Freight Transport, Integration with ITS and Intelligent Logistics
